

Testimonial Report of Feeding Celmanax[®] at Looslea Holsteins, Scappoose, OR.

I have always fed yeast culture in the herd seeing results with the milk fat yielding higher test scores. I used DV yeast culture and switched to Celmanax[®] in the spring 2007.

Celmanax has maintained the milk fat test but also, has lowered the somatic cell count in the herd.

**Organic Dairy - 150 cows
30 years milking cows.**

**Mark Holt, President, Varied Industries
Corporation, Netty Loos, Owner, Looslea Dairy,
David Wishmeyer, Nutritionist, CHS**

Our dairy grazes in the pasture. Through the summer and till September we double (2oz/hd/day) the feeding rate. In the fall then we go back to 1oz/hd/day, feeding rate and then continue to monitor cattle and the test records.

**Cows are healthier with
Celmanax in their diet!**
