

Testimonial Report on Feeding Celmanax® Liquid makes a difference on calves for Carrie Sachs, Eyota, MN

Carrie Sachs, Eyota, MN Calf Raiser, who also works Part Time at the Mayo Clinic in Rochester MN as a RN in the Neonatal Special Care Unit says "Celmanax® Liquid is an excellent product to knockout *E-coli* scours in her calves." Even though her colostrum management and early calf care is provided to insure a proper health status early in the calf's life Celmanax Liquid does work!

Carrie has not used any scour antibiotic treatment except for electrolytes therapy since she started using Celmanax Liquid and does not see any symptoms of Clostridium type bloat which was common at 7-10 day of age.

Even though ADG on Celmanax fed calves is slightly higher 1.68 vs-1.62 than calves not fed Celmanax Carrie feels very strongly about the HIGHER health status with the presence of Celmanax Liquid with reduced antibiotic use.
