

Testimonial Report on Feeding Celmanax[®] Liquid to Calves Great Results for Sutton Rucks in Okeechobee, FL

**Sutton Rucks, Owner Milking R Dairy,
Okeechobee, Florida**

“We started adding Celmanax[®] Liquid to our calves’ milk and noticed healthier, more aggressive calves. We start at day two with the recommended dosage and continue up until weaning. All of our calves are sent to a grower in Ohio, and he was having problems with the health of these calves when they arrived. Shortly after we started giving the product to our calves, our grower called and asked me what we were doing differently. I told him, the only protocol change that we have made was the addition of the Celmanax Liquid product. His response was to keep using it! The calves that come off the truck now are much healthier and more aggressive than before!”

“With Celmanax Liquid we have seen great results in the calves on our dairy!”
